About my HTML/CSS course projects- Vinicius Toshiaki de Morais Nakayama (finished on 03/01/2025)

In this Github repository contains my main project working on HTML and CSS (Youtube main page replication with a few functionalities) and others that show how much I've learned through out my course as a whole. Including:

-Button styling (padding, width, height, text colors, text decorations and a lot more);

-Nested layouts techniques (using flexbox and grids);

-Experience utilizing devtools to identify colors and site structures;

-CSS positioning;

I would also like to remark that I learned consideringly more than said here but the list would be longer, for more information please contact me at mckartyfordiscord@gmail.com and I will answer as soon as possible.
